### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### Status

- 1) ☐ Responsive to communication(s) filed on \_\_\_\_.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 5 to 8 are rejected under 35 U.S.C. 103(a) as being unpatentable over European patent 1113084 or Takahashi (US Patent 6,645,318) in view of Omosako et al (US Patent 5,677,268) or Moyle et al (US Patent 5,859,095).

3. EP'084 specific example E in Table 1 on page 9 and Takahashi steels A,D and J in Table 1 of columns 7 and 8 meets the claimed composition and when calculated, satisfy the claimed equations 1 and 2. Moreover, EP'084 in Table 4 on page 15 and Takahashi in Table 2 of columns 7 and 8 discloses R values of at least 2. Even though a JIS G 0552 of at least about 6 and an X-ray integral intensity ratio (222)/(200) at a plane parallel to the sheet surface is not less than about 15 as recited by one or more of the claims is not taught by prior art, such would be expected since composition and property limitations are met and in absence of proof to the contrary.

4. Even though prior art does not teach a ferritic stainless steel sheet bake-coated with a lubricant comprising acrylic resin, calcium stearate and polyethylene wax as recited by the claims, such would not be a patentable difference. It is well known in the art and common practice to add a lubricant to steel surface in order to improve the material workability and press forming by reducing the coefficient of friction and also to

protect steel surface from corrosion as evident by Moyle et al and Omosako et al.

Hence it would be an obvious modification well within the skill of the artisan to incorporate lubricant to the primary reference steels since improved workability and corrosion resistance are desired and sought.
